Summary

Backend and cloud engineer (Java, Node.js/TypeScript, AWS) who builds end to end and explains it clearly. Lead a 100+ member AWS Student Builder Group, running weekly sessions and mentoring 70+ students on real projects.

Skills

Languages: Java, Python, JavaScript, SQL
Databases: PostgreSQL, MongoDB, Redis
Backend/Web: Node.js, Express.js, React.js, Prisma, REST APIs
Cloud & DevOps: AWS (EC2, ECS, Lambda), Docker, Git

Work Experience

Nokia, Chennai Sept 2026 - Present

Intern (Product Testing)

• Helped build an internal Spring Boot (Java) tool that automates API testing across 5 Corteca cloud services, as part of a 4 member team in the BBD Corteca cloud unit.

• Built test cases from the Swagger/OpenAPI docs for 230+ routes across GET, POST, PUT, PATCH and DELETE, checking payloads, headers, and response codes and bodies against the documented contract.

• Reviewed the automated cases to confirm they matched the payloads, headers and response checks previously done manually. Scope is positive-path testing (valid requests, expected success responses). **Tools:** Java, Spring Boot, Swagger/OpenAPI, GitLab

Dexwox Innovations, Chennai Feb 2025 - Apr 2025

API Engineer

• Built the JWT authentication flow (token issuing, verification, protected routes) in Node.js and Express, and wrote the React-side API integration against it.

• Wrote backend APIs with Prisma and reduced API latency from a 300 ms baseline to 220 ms by introducing connection pooling and TCP keep-alive connections, validated using Prometheus metrics.
Tools: Node.js, Express.js, Prisma, JWT, React.js

Open Source Contributions & Competitions

• **tough-cookie (Salesforce)** Merged PR #650 : Fixed Cookie.validate() accepting invalid cookie names by validating names against the RFC 6265 token grammar, with tests. Parsing and storage behavior unchanged.

• **hiring-agent (HackerRank)** Open PR #462 : Added ensemble scoring to counter LLM scoring non-determinism, aggregating N runs into median scores, ranges, standard deviation and confidence labels. Also fixed two bugs (optional profile URL parsing, template path resolution).

• **HackerRank Orchestrate** : Extracted figures from image inputs with Gemini vision, computed all numbers with deterministic math, and used Gemini only to turn the results into a structured written explanation.
Tools: Python, Gemini API (Flash)

Project Work

• **MicrOps** Live | GitHub : Solo-built MicrOps, a DevOps automation platform deploying tenant projects via GitHub Actions/Jenkins into dynamically provisioned Fargate containers, with Stripe billing, OpenAI-powered failure diagnostics, and live SSE build streaming. Independently diagnosed and resolved a 3-day ALB-to-ECS networking failure caused by security group misconfiguration.
Tools: React, TypeScript, Node.js, PostgreSQL, Redis, BullMQ, Docker, AWS (ECS Fargate, EC2, S3, ALB, VPC), Jenkins, GitHub Actions, Stripe, OpenAI API

• **Nephele** Live | GitHub | Video: Built Nephele, a college-sponsored voice AI robot for placement prep, used weekly by 30+ students and demoed live to AWS representatives. Hand-coded the real-time pipeline (WebSocket, FastAPI, Deepgram STT/TTS, GPT-4o-mini streaming) with barge-in interruption and sub-450 ms voice response latency. Fixed an intermittent TTS cancel race during barge-in. Integrated a Raspberry Pi driving the robot's wheel base.
Tools: Python, FastAPI, WebSockets, Deepgram, OpenAI API (GPT-4o-mini), Raspberry Pi

• **CodePro** Live | GitHub : Built an online coding platform (React.js, Monaco Editor) with backend code execution via Judge0, BullMQ, and Redis, load-tested to handle 400 concurrent requests in under 2 minutes. 60K+ submissions per month, Designed PostgreSQL schemas for problems, test cases, and tenant-based data separation.
Tools: TypeScript, Node.js, React.js, Judge0, BullMQ, Redis, PostgreSQL, Docker, PM2, NGINX

Education

St.Joseph's Institute of Technology, (Anna University) Aug 2023 - Jun 2027
B.Tech. in Artificial Intelligence And Data Science ***CGPA: 8.5/10***
Relevant Coursework: Object Oriented Programming, Databases, Data Structures and Algorithms, Operating Systems, Computer Networks, Machine Learning, Information Retrieval

Leadership & Community

• **AWS Student Builder Group Leader (2026 to 2027)**: lead a 100+ member student cloud community and a 10-person core team; organised 3 events with workshops at 100+ attendance

• **AWS Community Day Event Coordinator**: demoed Nephele, a voice AI robot, live to AWS representatives
